

CROMWELL Sherwood. Jobber Drill, 29/64in., Normal Helix, High Speed Steel, Black Oxide

Cod comanda: **SHR0254436D**

Descriere produs:

The J100 Series are general purpose HSS straight shank drills with a black oxide finish. Ideal for applications involving steel (including cast steel) cast iron (Including malleable cast iron) as well as nickel, brass aluminium alloys and graphite. Their 118° point allows for precise hole alignment and reliable cutting performance whilst the black oxide coating helps reduce heat by retaining coolant on the tool surface. It also helps reduce the risk of the tool staining. Features and Benefits o General purpose drills with a black oxide finish o Ideal for applications involving steel, iron, nickel, brass, aluminium alloy and graphite o Point angle of 118° for precise holemaking and precision cutting o Black oxide coating helps aid chip flow, reduce heat and prevent staining Standards o Manufactured to BS 328/DIN338RN Typical Applications o Cutting and drilling o Ferrous materials
